

Ariela Yashinsky

Troy, MI — arielamyash@gmail.com — www.linkedin.com/in/ariela-yashinsky

EDUCATION

Michigan State University, East Lansing, MI

August 2019 - May 2024

Bachelors of Science, Mathematics

GPA: 3.62

Minor in Computer Science

Relevant Coursework: Machine Learning, Data Structure and Algorithms, Algorithm Engineering, Computer Organization and Architecture, Object Oriented Software Design, Abstract Algebra, Linear Algebra, Discrete Structures.

EXPERIENCE

Fermi National Accelerator Laboratory

Batavia, IL

Undergraduate Women in STEM Intern

May 2023 - August 2023

- Analyzed simulated particle physics data from Monte Carlo event generators to study the Higgs Boson self coupling property.
- Developed Python and C++ programs to parse large datasets, optimize run-time efficiency, and visualize outputs.
- Learned and applied machine learning concepts by interpreting results produced by pretrained models.
- Met with the Executive Office of Science and Technology Policy, and D.O.E. Office of Science about physics research to represent Undergraduate Women in STEM internship.

Michigan State University

East Lansing, MI

Undergraduate Learning Assistant

January 2022 – May 2024

- Taught introductory calculus-based physics by facilitating discussion among groups to encourage collaboration, and critical thinking on in-class projects.
- Guided students in debugging and correcting 3D physics simulation programs written in Python.
- Wrote individualized, weekly feedback aimed at improving students' problem solving strategies.

Straight Forward Consulting

Remote

Sales Engineering Intern

April 2021 – September 2021

- Built a digital storefront experience using Liferay DXP designed to achieve customer's business objectives.
- Designed and implemented web components with HTML, CSS, and JavaScript to improve user experience.
- Gained exposure to web applications and client server-based architecture.

PROJECTS

Harold's Incredible Machine

November 2023 - December 2023

- Programmed a virtual Rube Goldberg machine using C++ and Box2D physics engine.
- Added features for XML-based save/load functionality, animated objects, and user interaction.
- Collaborated in a team with 7 colleagues to design a UML specifying classes and important functions in order to optimize implementation.

SKILLS

- **Programming Languages:** Python, C++, C, React, HTML/CSS, JavaScript, MATLAB
- **Tools and Libraries:** NumPy, Pandas, TensorFlow, Git
